**Working in close partnership with our customers,  
we manufacture innovative and bespoke instrumentation.**

We have over 50 years of knowledge and experience in our workshop. Our team of highly skilled technicians undertake a minimum apprenticeship of 5 years and are trained to manufacture instruments, rather than just repair them. This gives us 360 degree understanding of the challenge and the importance of correctly functioning medical devices.

We care immensely about the work we do, never forgetting that instruments we create and repair are responsible for saving lives.

We insist on controlling the quality of every item we manufacture, from the materials used to the rigorous procedures we apply to testing. Our range of supporting products are serviced and repaired in-house, ensuring we are always able to exceed our customers' expectations.

Customers can receive training, participate in factory visits or simply call their local representative for guidance with instrumentation or management.

Skill-sharing has been at the heart of our business for four generations and we frequently arrange workshops and attend events at which we can educate others.

## Quality Assurance

We are an ISO 13485 accredited company.

Our comprehensive quality management system is in accordance with the requirements of the Medical Device Directive 93/42/EEC - Annex I & II, for temporary orthopaedic surgical implants - skeletal pins, wires, staples, guide wires - and all associated instrumentation.

**PRAZI MEDICAL** products undergo rigorous testing and inspection to applicable harmonised standards before leaving the factory. We offer CE marking on all Class I instrumentation, Class IIa and IIb implants, and can provide certificates of conformity for all materials used. Complete traceability throughout all aspects of the production process provides our customers with a fully documented quality control system.

All instrumentation carries a lifetime guarantee from the date of purchase on any fault found as a result of poor materials. This warranty is void, however, if repairs are carried out by anyone other than Surgical Holdings repair personnel, or if it is deemed to have been misused.

Please contact us or visit our website for current reprocessing instruction.

## An Overview On

# Forcep Jaw Types

You will see that forceps in our catalogue will have either a traditional serrated jaw or a different design which is known as atraumatic (or non-traumatic).

### Traditional Serrated Jaw

The traditional serrated jaw is generally more robust and used on forceps where the areas are not as delicate.

### Atraumatic Jaw

Atraumatic jaws will be mainly found in delicate surgery areas such as vascular and cardiothoracic. The design is such, that the surface area gripped is reduced, ensuring less trauma without the loss of grip.

## Choosing the most suitable needle size

Our tungsten carbide inserts are available in a variety of styles. Choosing the most suitable needle size for each procedure helps give the surgeon maximum grip and control.

### Coarse 0.65mm

For powerful needle holder patterns and wire twisters. Maximum holding capabilities for heavy needles or wire.

### Micro 0.2-0.3mm

For micro needle holders such as Castroviejo, Microvascular and Mini-Ryder. For delicate needles and sutures between 7-0 and 10-0.

### Standard 0.5mm

Used, for example, in Mayo-Hegar, Mathieu Needle Holders. For needles 3-0 and larger.

### Smooth

Smooth tungsten carbide surface reduces damage to delicate needles and suture of 6-0 and finer.

### Fine 0.4mm

For delicate needle holders such as Crile-Wood and DeBakey. For needles and sutures between 4-0 and 6-0.

## The difference between Monopolar Electrosurgery and Bipolar Electrosurgery

There is one basic difference between bipolar and monopolar techniques. With monopolar electrosurgery, a probe electrode is used to apply the electrosurgical energy to the target tissue to achieve the desired surgical effect. The current then passes through the patient to a return pad and then back to the ESU generator to complete the circuit.

With the bipolar electrosurgical method a bipolar device, often a set of forceps, is used. The electrical current passes from one side of the forcep, through the target tissue to the other side of the forcep, then back to the generator. The electrical current is restricted to the tissue between the forcep, therefore not requiring the use of a grounding pad.

## Taking care of your instruments

It is really important to ensure your instruments remain safe.

To do this, you will need a device which allows you to magnify distal areas of the instruments to check for:

- Burrs
- Corrosion
- Cracks

## Passivation Process

### Did you know...

**Stainless steel is self passivating which provides natural corrosion resistance.**

Passivation is the natural process that occurs to a surgical instrument containing chromium. The chromium in the stainless steel naturally reacts with oxygen in the air, creating the very thin passive layer which protects the surface of the steel.

## An Overview On

### Atraumatic Jaws

Also known as non-traumatic, atraumatic jaws will be mainly found in delicate surgery areas such as vascular and cardiothoracic. The design is such, that the surface area gripped is reduced, ensuring less trauma without the loss of grip.

Atraumatic jaws are available as straight or curved.
